Introduction to Assembly and Mounting Instruction Guide

Important: These instructions pertain only to the assembly and mounting of the Scorpion II 10002 Trailer Attenuator (TA). These instructions are only for the assembly of the models and/or accessories cited in each section. Any deviation from the models and accessories shown would require consultation with the appropriate highway authority engineer and/or certified TrafFix Devices, Inc. representatives. Contact information of these representatives can be found on the last page of this manual (Pg.26).

Proper Installation of the Scorpion II Trailer Attenuator (TA) is essential for proper performance of the system. For this reason, contacting a TrafFix Devices, Inc. Certified Attenuator Installer for assistance in mounting the system is recommended. Contact TrafFix Devices, Inc. to obtain a list of Certified Installers in the area. Please read this manual in its entirety before assembling, installing, or operating the Scorpion II TA. The information in this Manual supersedes all previous versions and manuals, with updated illustrations and other information available at time of printing; however; TrafFix Devices, Inc. reserves the right to make changes at any time. For any questions on proper Installation and Operation of the Scorpion, please contact us at (949) 361-5663.

Important: This manual applies to the Scorpion II® Trailer Attenuator by TrafFix Devices, Inc. It pertains only to the models referenced herein. It requires that all Assembly, Mounting, Service and Repair parts be Genuine Scorpion parts that have not been modified or repaired from the original in any way, unless with prior knowledge, consultation and approval by TrafFix Devices, Inc. Engineering.

Limitations and Warnings

TrafFix Devices Inc. (TDI), in compliance with the Manual for Assessing Safety Hardware (MASH) recommended procedures for the Safety Performance of Highway Features. TDI contracts with ISO accredited testing facilities to conduct crash tests, evaluation of tests, and submittal of results to the Federal Highway Administration for Eligibility for Federal-Aid Reimbursement. The Scorpion II Trailer Attenuator (TA) system was tested to meet the safety evaluation guidelines of MASH. The Scorpion II has been tested at TL-3 (62.1 mph/100 km/hr) speed impact conditions. These tests are intended to evaluate product performance by simulating those impacts outlined by MASH involving a range of vehicles on the roadways, from cars with an approx. weight of 2425 lbs. [1100 kg] to trucks with an approx. weight of 5004 lbs. [2270 kg]. The Scorpion II TA is a TL-3 tested device capable of decelerating and stopping the light and heavy weight vehicles 2425 lbs. [1100 kg] and 5004 lbs. [2270 kg] in accordance with the criteria of Tests 3-50, 3-51, 3-52, and 3-53 for TL-3 (62.1 mph/100 km/hr) for FHWA Eligibility. Reference FHWA Eligibility letter CC-138. Additionally, the Scorpion II TA was tested to meet the requirements of TD 49/07 UK. These tests are based on the requirements for Lorry Mounted Crash Cushions from the Highways England Road Ministry. These specified tests are not intended to represent the systems performance when impacted by every vehicle type or every impact condition existing on the roadway. This system is tested only to the test matrix criteria of MASH and TD 49/07 UK. TrafFix Devices does not represent nor warrant that the results of these controlled tests show that vehicle impacts with the products in other conditions would necessarily avoid injury to person(s) or property. Impacts that exceed the systems specifications may not result in acceptable crash performance as outlined in MASH; relative to structural adequacy, occupant risk, and vehicle trajectory. TDI expressly disclaims any warrant or liability for injury or damage to person(s) or property resulting from any impact, collision, or harmful contact with products, other vehicles, or nearby hazards or objects by any vehicle, object or person, whether or not the products were installed by third parties. The Scorpion II TA system is intended to be assembled, delineated, and maintained in accordance with specific State and Federal guidelines. TDI offers a reflective delineator panel for its TA line of products. However, the material is only intended to supplement delineation required by the Department of Transportation’s “Manual on Uniform Traffic Control Devices” (MUTCD). The appropriate highway authority approved engineer should properly select, assemble, and maintain the product. Careful evaluation of the speed, traffic direction, and visibility are some of the elements that require evaluation for the proper selection of a safety appurtenance by the appropriate specifying highway authority.

Safety Instructions
Scorpion II Trailer Attenuator (TA)

A. Before attempting to install or operate the Scorpion II 10002 TA, this manual should be read and understood. Those areas with warnings or cautions should be carefully followed.

B. Before operation on the roadway, check all fasteners between the Tongue, Strut and Cartridge areas for tightness and excessive wear.

C. Check lug nuts for proper torque values to 95 ft-lbs.

D. Check that the single crank jack is fully retracted and up in the locked pinned position before transport.

E. Inspect all lights for proper function.

F. For correct TA operation in the use mode, the entire TA should be 12” ± 1” [30.48cm ± 2.54cm] above the ground and horizontal to the roadway.

G. The responsible agency for the truck should check that the following specifications are met. The truck should have a minimum weight of 12,000 lbs. [5,443 kg]. It should be equipped with proper operator safety equipment such as seat belts, headrest, etc. If ballast is needed, it should be properly anchored to the truck frame to prevent movement during an impact.

H. Before disconnecting the TA from the truck, make sure the TA rear wheels are chocked to prevent rolling when removed from truck.
Operating Instructions

Proper Operation includes knowledge of TA use in Work Zones, both Moving and Stationary, including the proper spacing, to allow for “roll-ahead”. Before use, the Operator should have prior knowledge/discussion of the Work Zone in which the TA will be deployed and that the TA model used has been tested to Test Level 3 = 100 kph/62 mph. TA’s should only be operated by individuals properly trained in their use in work zones.

Pre-Use Inspection

1. Walk around the unit inspecting for damaged, loose, or missing bolts, pins, cotter pins and safety snaps.
2. Inspect for damage to the energy absorbing modules and aluminum tubes, checking for deep gouges, deep scratches, warping, or cracking.
3. Inspect the steel structure for damage, looking for warping, cracks, breaks or other damage.
4. Inspect all lights for proper operation (including arrowboard, VMS, and Display Panel if applicable).
5. Check road clearance of TA in deployed mode, to ensure it is in specification (12 inches ±1 inch).
6. Ensure that retroreflective sheeting is in place and meets requirements for the job.
7. Check to ensure that there are no loose items on the truck that can become a projectile during an impact.
8. Make sure items in the cab of the vehicle are secure and cannot come loose and become a projectile should an impact occur.
9. Adjust the headrest properly for the driver of the vehicle.
10. Any deficiencies should be corrected before use.
### General Maintenance

**After Impact Removal & Repairs**

1. Disassemble system and mark for replacement, all bent and damaged parts.

2. Write down all part numbers for those items that need replacing – only TrafFix Devices, Inc. replacement parts can be used to return the repaired TA to as-manufactured condition.

3. After receiving replacement parts verify that the new part fit against the older parts and proceed to assemble per the installation manual.

4. After a vehicle impacts the TA, do not drive the truck with the damaged TA. Remove the TA at the pintle hook and have the TA transported back to the maintenance yard.

The steel tongue is a single point trailer attachment for towing the TA under normal use with a built-in anti-rotation design that activates a three-point contact engagement support when the TA is impacted. The single point trailer attachment with the anti-rotation design is called the Telescoping Anti-Rotation System (TARS) and is only activated when the TA is impacted. Under normal stationary or mobile use, the TARS acts as a single point trailer attachment. When the TA is impacted, the TARS tongue telescopes forward and a set of outboard anti-rotation supports contact the frame plate on the support vehicle preventing the Trailer Attenuator from rotating about the pintle hook and the rear of the support vehicle.
TELESCOPING ANTI-ROTATION SYSTEM (TARS)

PRE-IMPACT CONDITION POSITION DURING NORMAL OPERATIONAL USE

TRAFFIX DEVICES TRAILER ATTENUATOR ATTACHES DIRECTLY TO THE PINTLE HOOK AND REQUIRES LITTLE OR NO ADDITIONAL INSTALLATION OR TRUCK MODIFICATION BEYOND THE FACTORY INSTALLED FRAME PLATE.

TELESCOPING ANTI-ROTATION SYSTEM (TARS) STOPS UP AGAINST THE FRAME PLATE PREVENTING ANGULAR ROTATION DURING THE IMPACT

POST-IMPACT CONDITION POSITION AFTER IMPACT EVENT HAS OCCURRED

1. **IMPORTANT**: Before beginning assembly, please read and review the Installation Section of this manual, paying close attention to the checklist at the beginning of the section.

2. Inspect the three pallets containing the Cartridge (left), Strut (middle), and the Tongue (right) shown below, for shipping damage and completeness against the packing list. If there is anything missing or not complete, contact a TrafFix Devices representative as soon as possible.

3. **WARNING: TOP HEAVY**—Indicates to move pallets with extreme caution. The use of a forklift is preferred when handling pallets. All personnel should be kept clear when the pallets are being moved.

4. Remove the shrink-wrap from the pallets using a utility knife. **Caution: Be careful not to cut any wires or parts!**

---

**Recommended* Assembly Tools**

1. Hammer
2. Tapered Pry Bar
3. Tape Measure
4. 12” Crescent Wrench
5. 1/2” Drive Socket Wrench
6. 1/2” Drive Socket (1-7/16”)
7. Open End Wrenches (1-7/16”, 3/4”, 7/16”)
8. 3/8” Drive Socket Wrench
9. 3/8” Drive Socket (7/16”, 3/4”)
10. Allen Wrench
11. Wire Cutter/Crimper
12. Floor Jacks or Stands (2 Ea.)
13. Forklift

*More or less tools may be needed.*
Assembly of Scorpion II Trailer Attenuator (TA) (TL-3)

1. Note that the Warning Top Heavy means that caution should be used in moving the pallets. Use fork extenders on forklift and keep all personnel away while moving. **Note: Components are heavy and cumbersome. It may take several people to properly set up the Scorpion II TA.**

2. Unpack the pallet by removing the shrink-wrap and cutting the steel bands. **Caution: It is possible that when the steel banding is cut the TA Cartridge and Strut may shift a few inches. Keep personnel away from the TA when the steel bands are cut. Keep a few feet away from pallet when pallet is pulled free of the Cartridge because it will shift a few inches.**

Remove Module A, Module C’s, both fenders, and the wheels/tires from the Cartridge Section before it is taken off the pallet. Place TARS Tongue, Cartridge and Strut Sections in the horizontal position on a level work surface.

![Image of Scorpion II Trailer Attenuator (TA) (TL-3)](image)

Figure 1
3. Remove the following parts from the Strut:

- (8) ¾”-10 x 2-1/2” Bolts PN 12007
- (8) ¾” USS Flat Washer PN 12060
- (8) ¾”-10 Nylock Nuts PN 12008

Position the Strut in front of the TARS Tongue and bolt as follows:
- Starting with the outboard hole on the top of the vertical angle of the Strut, thread the bolt, head towards the truck, through a washer, the hole in the TARS, and then the hole in the Strut. Once the bolt is through, secure with another washer and the Nylock nut. Repeat on the bottom and the other side.
- On the inboard hole on the top of the vertical angle of the Strut, thread the bolt, head towards the truck, through a washer, the hole in the TARS, and then the hole in the Strut. Once the bolt is through, secure with another washer and the Nylock nut. Repeat on the bottom and the other side.

* = Reinforcing Bars MUST be Installed Inboard Side

Figure 2
4. Remove the following parts from the Cartridge:

(4) ¾”-10 x 2-½” Bolts **PN 12007**
(4) ¾”-10 x 3” Bolts **PN 12351-ZUM-3.0**
(8) ¾“ USS Flat Washer **PN 12060**
(8) ¾“-10 Nylock Nuts **PN 12008**

Position the assembled TARS Tongue/Strut in front of the Cartridge and bolt as follows:
- Starting with the outboard hole on the top of the vertical angle of the Cartridge, thread the bolt, head towards rear of TA, through a washer, the hole in the Cartridge, and then the hole in the Strut. Once the bolt is through, secure with another diameter washer and the Nylock nut. Repeat on the bottom and the other side.
- On the inboard hole on the top of the vertical angle of the Cartridge, thread the bolt, head towards the rear of the TA, through a washer, the hole in the Strut, and then the hole in the Cartridge. Once the bolt is through, secure with another washer and the Nylock nut. Repeat on the bottom and the other side.

*Reinforcing Bars MUST be Installed Inboard Side*
5. Install Module Box C, within the Cartridge section, to the top and bottom angles on the backside of the Strut. Torque the module bolts to a minimum of 20 ft-lbs.

6. Install the second Module Box C to the top and bottom angles within the Cartridge section at the rear. Torque the module bolts to minimum of 20 ft-lbs.
7. Install Module Box A to the top and bottom angles on the backside of the rear diaphragm. Torque the module bolts to minimum of 20 ft-lbs.

8. Remove the lug nuts from the studs on each of the axle. Install the fenders and wheel/tire and secure with lug nuts. Repeat for remaining side.

9. Plug the main power cable from the Strut into the electrical connector box on the Cartridge. Snap the wire retainers in place on the electrical connector box and wire tie the retainers together

10. The rear ICC bar light has two wires extending from it with plugs. Connect the plugs into the electrical wire plugs at the light. (Only use for 12V)

11. Connect the 7-pin electrical connector and verify that all the lights function correctly. (Refer to Wiring Schematic)

12. Hook up to appropriate host vehicle and road test the Scorpion TA.

13. Check all bolts for tightness after the road test and refer to the maintenance section of the manual to set up regular maintenance.

TA Limited Warranty

TrafFix Devices warrants to the purchaser that the Scorpion II Trailer Attenuator (TA) is free from any defects in materials and workmanship. If this product proves to be defective in material or workmanship during the period of this warranty, TrafFix Devices will repair or replace, at its option, the defective product free of charge. The period of this warranty is the one year period beginning from the date the purchaser puts the unit into service or one year from the date of purchase.

To obtain warranty service, the purchaser or distributor must first fill out a warranty authorization form and email same to TrafFix Devices to have our technical services department evaluate the problem and recommend repair procedures. TrafFix Devices will then issue a signed warranty work approval form to authorize the distributor or customer to repair or replace any items, which TrafFix Devices deems to have been defective. All replacement parts claimed to be defective will be invoiced at the time of shipment, and upon receipt and evaluation a credit memo will be issued.

This warranty does not extend to any failure of the Scorpion II TA caused by misuse, abuse or material alteration of this product, or any negligence in connection with the installation, service, or use of this product. For the correct installation, service, or use of this product refer to the installation manual, the operator’s deployment instructions, and the operator’s checklist.
